ISO 9001:2000

- ISO 9001:2000 is an international standard that business organizations across the world give importance to. It provides assurance about the maximum quality and efficiency of the business operation.
- The ISO 9001:2000 is an international standard on good quality management practices. The key principle of the ISO 9001:2000 is to provide a set of standardized requirements for a quality management system. The system will ensure that all the working processes can be controlled and audited through documentations which clearly indicate working processes and practices. Under the system, organization personnel will be assured that they understand their responsibilities and all working processes. Training has to be provided to them to develop knowledge and skills. All the processes have to be documented and audited whether they are in accordance to the documents. Mistakes have to be resolved and preventive measures have to be taken to avoid repetitive mistakes.

ISO 9001:2000

Currently the ISO 9001:2000 has become one of the conditions or requirements in international business. It also opens wider gates for international trade.

A standard for all organizations

ISO 9001:2000 emphasizes on the role of management executives to give priority to the needs and expectation of customers and stakeholders. The ISO 9001:2000 can always be applied, regardless of what the user organization does, its size, or whether it is in the private, or public sector. It can also be applied to small and medium-sized enterprises (SMEs) to improve their quality of products and services to be in the same level as of larger or well-known organizations.
